

PT. Indo -Rama Synthetics Tbk (“Indorama”)

Environment Policy

Indorama recognizes that our business, especially our manufacturing activities, has an impact on the environment. We are committed to preventing and reducing any adverse environmental impact from our actions and ensuring that we follow best practices for the same. We are committed to complying with global industry standards and meeting, if not exceeding, all legal requirements. We are also committed to making continuous improvements in our environmental performance, including regular training of our employees about environmental issues and practices. In addition to our own impact, we will also help and ensure that our business partners are responsible to the environment.

We will actively seek ways to reduce our energy consumption, waste, negative emissions, and consumption of resources while improving our recycling and management practices.

We will continue to take measures to reduce our carbon footprint, such as ensuring that computers are in sleep mode or switched off after use; promoting the use of electronic communications and products; recycling waste paper, print cartridges, kitchen waste, and electronic equipment; encouraging employees to implement car share and cycle to work programs.

We will make use of renewable energies where economically viable; use low-energy bulbs and energy efficient equipment; use teleconferencing facilities to reduce travelling to meetings and lower our carbon footprint. We will continue to be a responsible neighbor in the communities in which we operate and support the quality of community life.

Every site will maintain an internal management structure for the management of environmental issues with clearly defined responsibilities. We will regularly monitor our environmental performance and set objectives and targets for improvement.

Climate Change

Climate change has now been recognized as an international issue. We are therefore committed to reducing the greenhouse gas emissions from our operations in a way that supports national strategies and in line with our commitment to our stakeholders to provide a sustainable business.

Our key climate change commitments are to assess the potential impact to our business from evolving climate change policies as part of our on-going risk management processes and to work actively with our key suppliers to improve the reduction of waste.
